Anabilim Dalı

İnvaziv kandidiyazis: Neden önemli?

- Mortalitesi yüksek (%36-63)
- Yoğun Bakım Üniteleri
- Birçok ülkede kandidemi insidansında artış
- Dirençli türlerin görülme sıklığında artış

Hematolojik malignansili
olgularda non-albicans
Candida

YBÜ'lerinde ve yaşlı
olgularda *C. glabrata* ve
diğer non-albicans *Candida*
türlerinde artış

Why are you making such a fuss about this candida business? I've already prescribed you an anti fungal. That should have taken care of it. Even if you were to have this fungal problem the rest of your life it's no big deal. The medication is perfectly harmless and can be taken indefinitely. Harping on about antibiotic 'poisoning' and repetitive thrush 'syndrome' is nothing short of hypochondria. Come to think of it, I could prescribe you an anti-depressant for this obsessive neurosis of yours. How about that?

ERİŐKİN OLGUDA GELİŐEN İNVAZİV KANDİDİYAZİSİN TEDAVİSİ
